

A/B TEST - USABILITY (STATEMENT)

UX Research A/B Test Research

Jennifer — UX/UI Designer

1 week · 2026

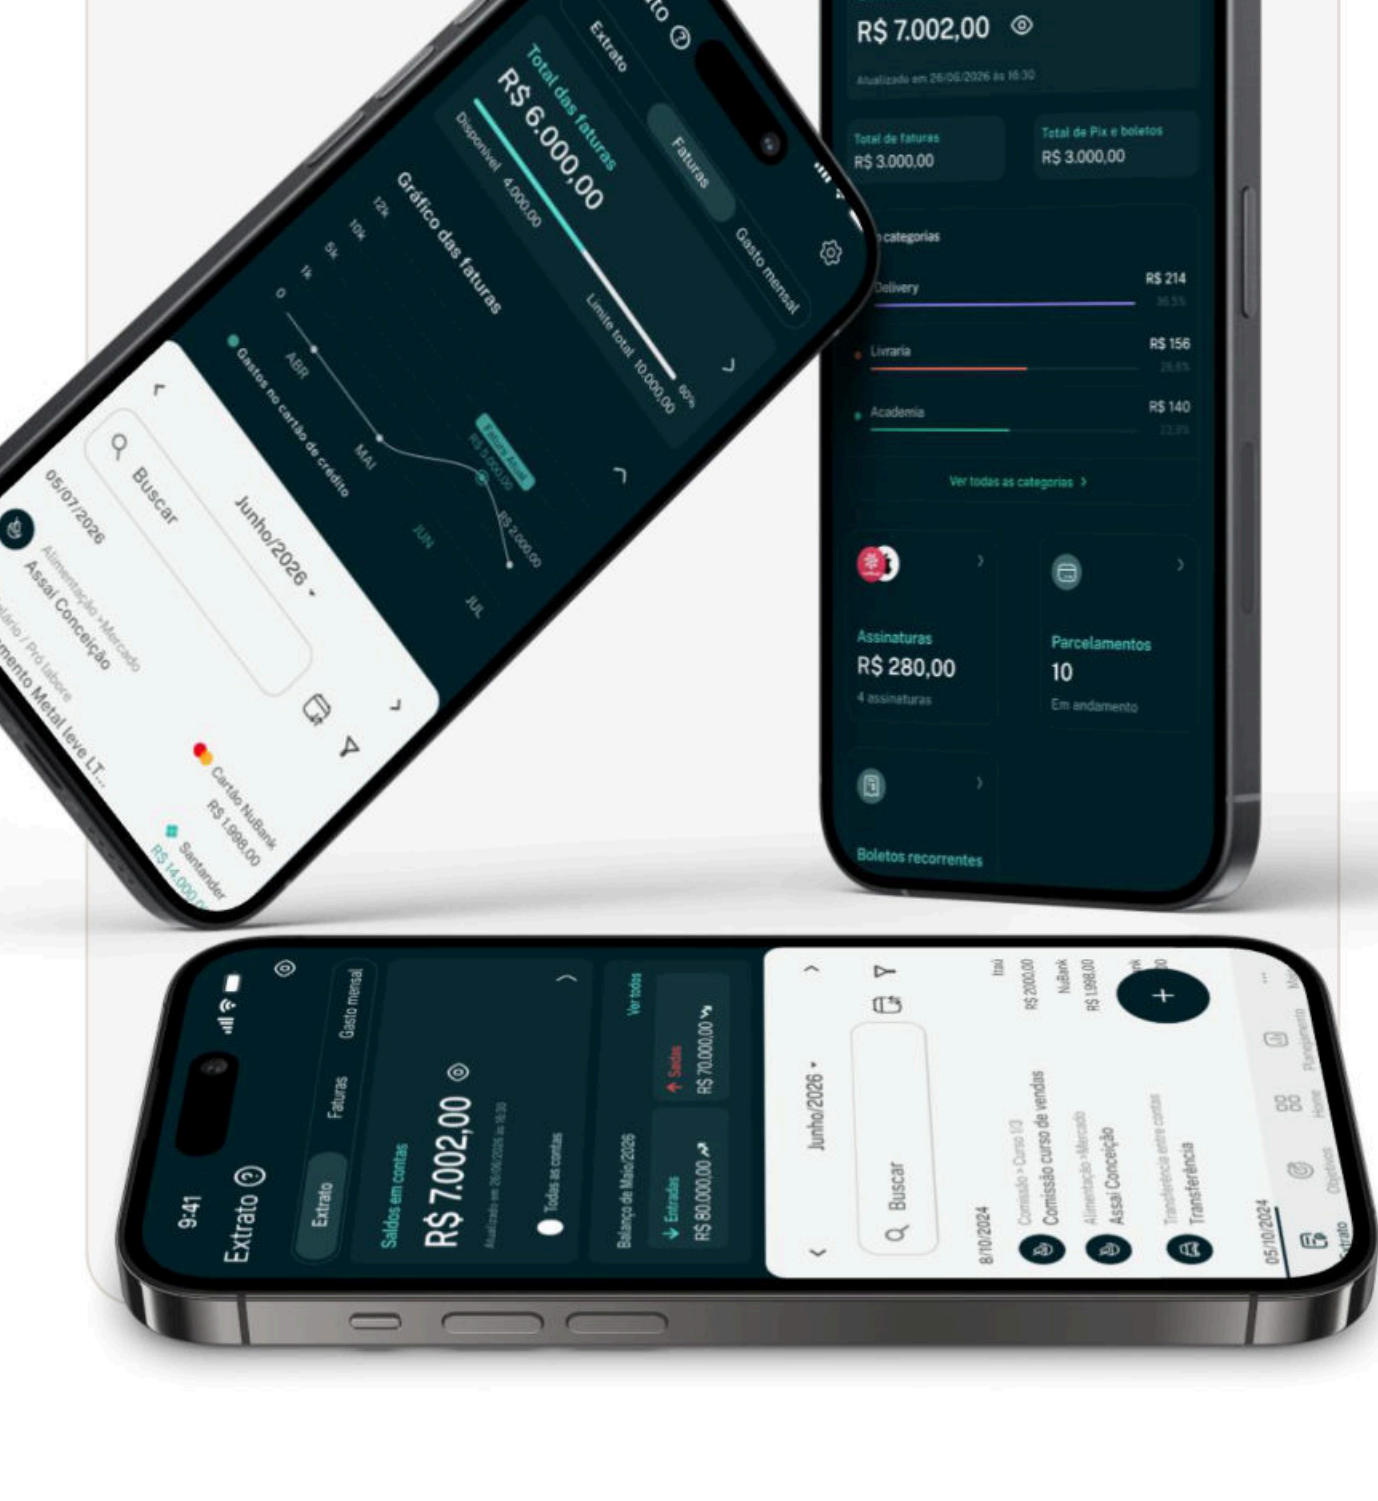

CONTEXT

The statement existed. Understanding it was the real challenge.

S1NC mixes checking account transactions with credit card spending into a single cash flow view — creating five structural distortions that confuse the user.

- 1 Unrealistic balance due to accrual-based accounting
- 2 Double counting of credit card spending
- 3 Lack of visibility into what will be paid in the current month
- 4 No separation between account and card
- 5 Card screen with low perceived value

GOAL

Three views, three clear answers.

Separate account balance, card invoice, and consolidated spending view — each screen answering a specific question, without mixing different financial logics.

PERSONAS

Who feels the problems

Which transaction display model do you find easiest to understand?

CW W1 Consultant Main pain point Needs to explain the app's distortions in meetings with clients; loses credibility.	UF Free User Main pain point Confusing interface forces manual hiding of transactions.	UP Premium User Main pain point Confuses duplicated spending caused by Open Finance bugs; doesn't know how much the invoice will be.

RESEARCH & A/B TEST

What the research showed

41

Respondents - Consultants

7

Questions (5 closed-ended + 2 open-ended)

Jun 10-16

Research collection period

SOLUTION

Three screens: Account, Credit Card, and Monthly Spending — replacing the single statement. Monthly Spending solves the lack of visibility into actual cash flow, letting the user choose between accrual basis (purchase date) or cash basis (invoice due date).

RESULT & A/B TEST

Where the data decided the DESIGN

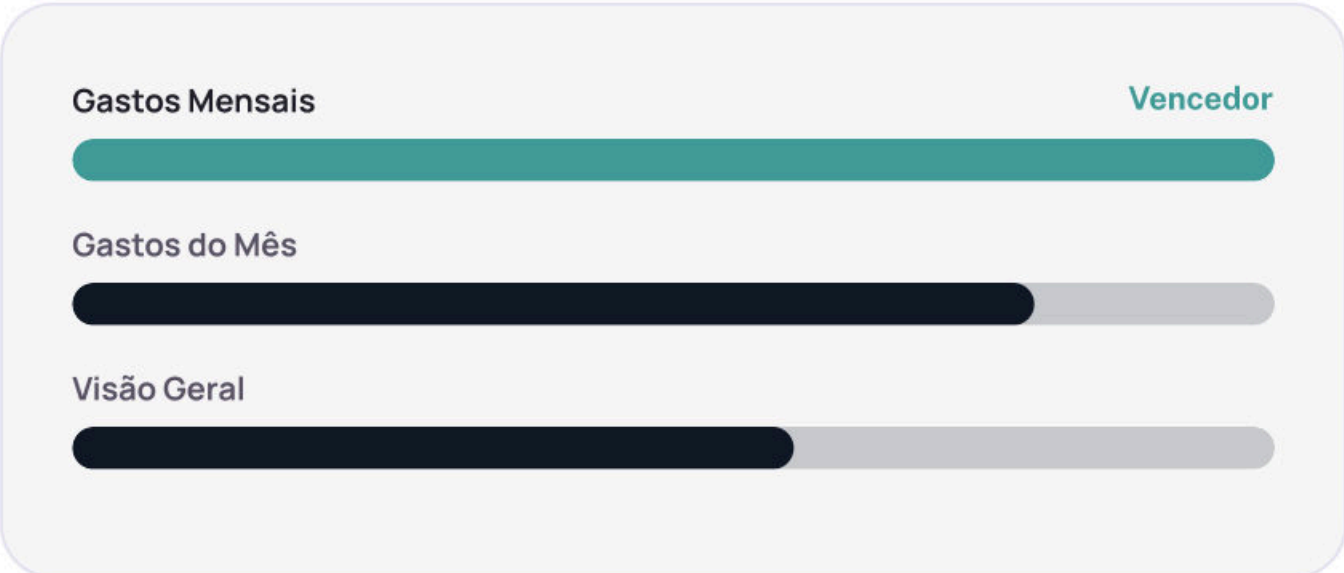

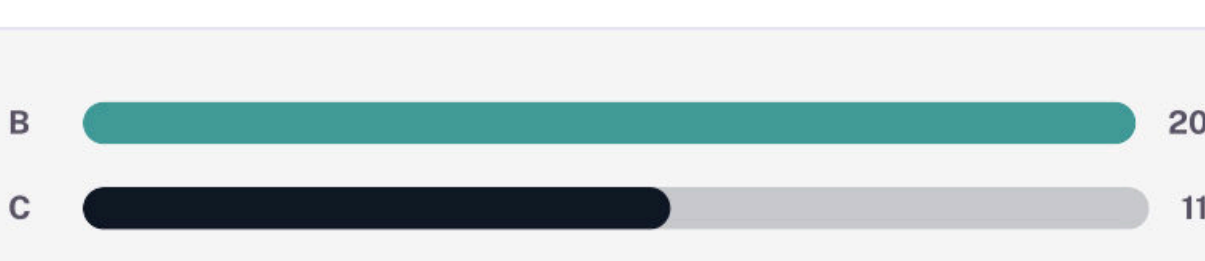

Which transaction display model do you find easiest to understand?

Opção A 8/10/2024 Comissão > Curso 1/3 Comissão curso de vendas Alimentação > Mercado Assai Conceição Transferência entre contas Transferência Itaú R\$ 2000,00 NuBank R\$ 1.998,00 NuBank R\$ 1.098,00 Sem ícones para todos os cartões	Opção B Vencedora · 59% 05/07/2026 Alimentação > Mercado Assai Conceição Salário / Pró labore Pagamento Metal Leve LT... Boleto Boleto vale alimentação Cartão NuBank R\$ 1.998,00 Santander R\$ 14.000,00 Bradesco R\$ 1.000,00 Ícone de cada bandeira + Pix + boleto
---	--

QUESTION 1

Navigation between views

49% chose Option B — a single component with three views ensures the user is always aware of the three views available.

QUESTION 2

Name of the consolidated screen

Gastos Mensais" combina a clareza de "Gastos do Mês" com a precisão temporal de "Mensal", evitando a ambiguidade de "Visão Geral".

DECISIONS

From the vote to the design decision

ABOUT THE PROBLEM

- Five structural distortions in the single statement
- Duplicated credit card spending in reports
- No clear view of what will still be charged to the invoice

SOLUTION OVERVIEW

- Single component with the three views (Option B)
- Default view when opening the app: Monthly Spending
- Number as the main focus, chart as support

SOLUTION

"I wouldn't have to keep hiding invoice payments anymore."

RESEARCH PARTICIPANT · W1 CONSULTANT

LEARNINGS

What we've learned so far

- Users prefer a complete view: in Monthly Spending, everyone saw the total number as the balance — not as the sum of account + card.
- Consultants prefer viewing numbers rather than charts.
- Users prefer a separate view for each thing, cleaner, rather than several small pieces of information on a single screen.
